

## Server Side Redirection.

One resource within the engine can forward to other resource within the engine

This concept is used for multi-stage processing of data. Used in MVC pattern

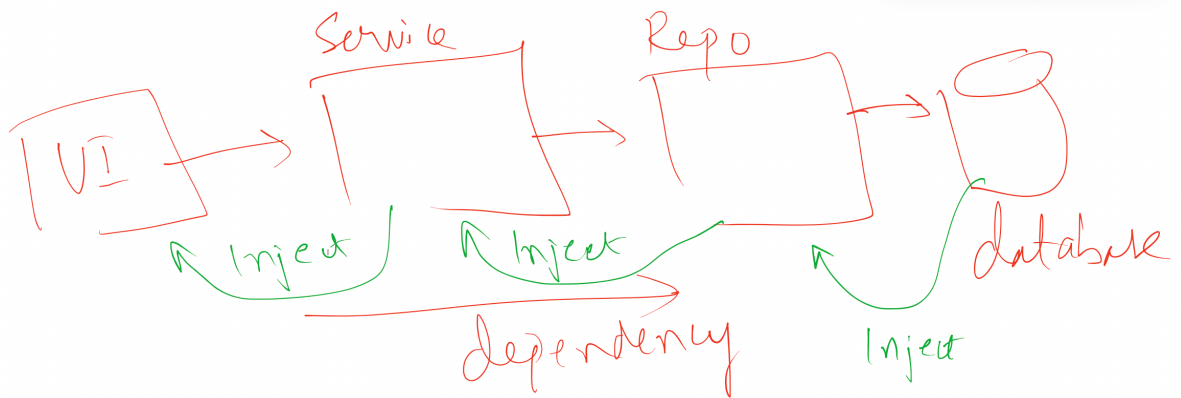

With this we can carry data from one resource to another resource by placing it in request object

### server side redirection

v

```
public interface EmployeeDao {
    void addEmployee(Employee e);
}
```

```
public class EmployeeDaoJdbcImpl implements EmployeeDao {
    public void addEmployee(Employee e) {...}
}
```

```
public class EmployeeDaoMongoImpl implements EmployeeDao {
    public void addEmployee(Employee e) {...}
}
```

```
public class AppService {
    private EmployeeDao empDao;
```

```
    private void setEmpDao(EmployeeDao edao) {
        empDao = edao;
    }
```

```
    public void insert(Employee e) {
        empDao.addEmployee(e);
    }
}
```

← dependency

SPRING CONTAINER

```
<beans>
  <bean id="jdbc" class="pkg.EmployeeDaoJdbcImpl" />
  <bean id="mongo" class="pkg.EmployeeDaoMongoImpl" />
  <bean id="service" class="pkg.AppService">
    <property name="empDao" ref="jdbc" />
  </bean>
</beans>
```

↓ METADATA

↓ service.setEmpDao()

Ready to use

```
@Repository
public class EmployeeDaoJdbcImpl implements EmployeeDao {
    public void addEmployee(Employee e) {...}
}
```

```
@Service
public class AppService {
    @Autowired
    private EmployeeDao empDao;

    public void insert(Employee e) {
        empDao.addEmployee(e);
    }
}
```
